**Title: Frozen Bubble**

**By: Paula Kelley**

During our cold snow days, I tried my hand at photographing frozen bubbles. It was necessary for the temperature to be between 16-18 degrees; otherwise the bubble would not freeze. I was out at sunrise and caught the sun as it was just rising from the Mts. In order to catch the light I was photographing low using the Sony 90 mm Macro lens at f2.8. The freezing process happened quickly at this temperature and after many attempts I found I liked taking sequential shots as the bubble started to freeze until it was frozen. This photo was taken towards the end of the freezing process! Also it was hand held as the process was happening fast and the light was changing quickly as well. It was a lot of fun and kept me busy experimenting with the temp of the mixture, the back ground, getting a clear image and capturing some of the morning light!

Bubble solution: A mixture of 1.5 cups of water, 1/2 cup liquid dish soap, 1/4 cup light corn syrup and a Tbsp sugar. Stored In the fridge. I used a straw to blow the bubbles on to the snow.

The image was taken at ISO 100, F16, 1/400 sec
